Scope and methodology

JSC Bank of Georgia and JSC TBC Bank

Two Georgian universal banks with audited separate-bank statements in GEL and NBG capital disclosures. Common reporting year: 2025.

Financial boundary

Separate-bank IFRS figures. Capital uses NBG Basel III bank disclosures. Wider parent groups are excluded.

Calculation method

Six historical ratios. ROA and ROE use opening/closing averages. Net customer loans exclude BOG factoring and leases.

Preliminary public-information review. No credit rating or investment recommendation.

2025 ratio comparison

Calculated metric	BOG	TBC
ROA	4.08%	3.35%
ROE	29.31%	23.35%
Net customer loan growth	15.64%	10.04%
Net loans / customer funding	99.03%	108.39%
Cost / income	29.97%	31.42%
Total regulatory CAR	22.04%	22.52%

Two-point averages. Funding definitions differ. Cost/income retains source classifications.

Higher BOG returns

ROA gap: 0.72 percentage point. ROE gap: 5.96 points.

Different funding mix

TBC exceeds 100% of customer funding. Other funding requires review.

Capital above minima

Headroom: BOG 1.84 points and TBC 2.52 points.

Risks and further due diligence

Unresolved comparability

BOG funding includes notes. TBC loan-note and separate-bank totals differ in 2024 by GEL 1.245 million.

Stage 3 and NPL definitions differ. No cross-bank asset-quality ranking is made.

Country risk

IMF July 2025: dollarization, consumer credit and political/external uncertainty. A 2026 update is needed.

Questions for the investment officer

1. Can each bank bridge Stage 3, POCI and regulatory NPLs on the same bank scope?

2. How concentrated and stable is funding across currencies and maturities?

3. What happens to CET1 and capital headroom under FX and credit-loss stress?
